Email consumes significant time and attention in the workplace. We conducted an organizational survey to understand how and why people attend to incoming email messages. We examined people's ratings of message importance and the actions they took on specific email messages, based on message characteristics and characteristics of receivers and senders. Respondents kept half of their new messages in the inbox and replied to about a third of them. They rated messages as important if they were about ...

This paper presents a framework for message delivery in real-time multi-player distributed interactive games that use the client-server model. Based on this framework, we propose message delivery algorithms that remove the unfair advantage that players with smaller message delays from the game server receive over players with large message delays from the server. The framework is very general in the sense that it does not require assumptions of synchronized clocks at the players and servers; nei ...
